Vysakh G Nair

Founding Product Designer

vysakhnair.me@gmail.com
Bangalore, India

One company, three products, the same job each time: make a hard system usable. Blockchain data developers could see, crypto markets people could understand, and AI agents people could trust with money. I own the work from problem discovery to shipped product, alongside founders, engineers and customers.

EXPERIENCE

2022 — Present

Co-founder & Product Designer

Airstack, Moxie, Senpi (one company)

Design lead through every stage of the company, embedded with the CEO, engineering, growth and customers: making blockchain data accessible, then crypto creation and trading, then autonomous AI trading trustworthy.

Senpi — autonomous AI trading on Hyperliquid · 2025–present

• Helped lead the refocus from token trading to **autonomous AI-agent trading**: describe a thesis in plain English and a dedicated agent builds, funds, runs and protects the strategy. Led the **Senpi rebrand** across web, mobile, product and marketing.

• Diagnosed the activation barrier as trust, not trading: ~1% of signups funded, yet nearly all funded users traded. Led UX across onboarding, funding, risk communication and agent visibility; **signup-to-funded rose from ~1% to 11%**.

• Redesigned the agent experience around visibility and control: decision timelines (“View all scans”), per-trade theses and kill conditions, consequence-based permissions, and a Build, Run, Review, Learn model.

• Since relaunch: **1M+ agent-executed trades, $418M trading volume**. Designed the AI chat, trading dashboards and subscription experience across web and mobile.

• Ran the activation and trust workstreams with growth and engineering: instrumented the signup-to-funding funnel, shipped iteratively, and validated the MFA rollout with our wallet partner, Privy.

Moxie — creator economy and Base trading · 2023–25

• Designed the end-to-end creator-coin experience on Base (launch, discovery, trading, wallets, airdrops), first inside Farcaster Frames: **10,000+ token launches**, tens of thousands of transactions, **$5M+ onchain volume**.

• Helped lead the move from Frames to a dedicated web platform when the format stopped scaling, then grew it into a broader Base trading product. Designed the Moxie token launch (**~$25M market cap / $65M FDV**) as mechanics moved from onchain auctions to bonding curves to Uniswap V4.

Airstack — AI-powered blockchain data APIs · 2022–23

• Designed **Explorer**, a visual way into the data that hands developers production-ready GraphQL, replacing customer-built proofs of concept as the way to evaluate the platform. APIs adopted by **100+ startups, including Coinbase Wallet**.

• Designed **Studio**, natural language to GraphQL with a visual builder, later extended into a community where developers publish and discuss queries.

Across all three

• As the only designer, owned the full loop from problem discovery and hypothesis through UX, visual design, prototyping, implementation, QA and analytics, carrying PM work where needed in tight build–measure loops with engineering.

• Moved from a Figma-first to an **AI-native design workflow**, using tools like Lovable to prototype and validate working product.

2021 — 2022

UX Designer

Moxie — fitness platform for solo fitness entrepreneurs

• In a 5-person design team, shipped **6 major projects** across web and mobile with PMs and engineers.

• Designed Referral 2.0 and social sharing: **2.5× referral signups** in the first month.

• Designed the gamified experience (goals, challenges, streaks, badges), which contributed a **12% retention increase**.

2017 — 2021

Early design work

• **UX Designer, Popsicle Solutions** (2020–21). Took client products from wireframes to build, working with clients on needs and with developers through implementation. Separately designed **CoDri**, a documentation and project-update platform for construction companies.

• **Designer, then Design Manager, Excel MEC** (2017–21). Grew from designer to leading the tech fest's design team across posters, brochures and motion graphics.

• **Web Designer, Model Engineering College** (2020). Redesigned the college website from audience interviews, tested and iterated with front-end developers.

EDUCATION

2017 — 2021

B.Tech, Computer Science & Engineering

Government Model Engineering College, Kochi · CGPA 9.4 / 10

SKILLS

Product strategy, UX & interaction design, Visual design & branding, AI-native prototyping, Complex financial UX, Design systems, Figma, Lovable, QA & product analytics, Cross-functional collaboration
